

# BTD Capital Fund (DIP)

## About the Fund

BTD Capital Fund (Ticker: DIP) is a long-only equity ETF that offers investors the opportunity to capitalize on individual short-term mean reversions of large-cap U.S. stocks, using proprietary artificial intelligence (AI) technology to identify target investments.

## DIP in Three Bullets

- Stock prices are sometimes temporarily driven to levels below their fair market value, creating potential opportunities to profit from a short-term bounce.
- AI may help to identify oversold stocks with the highest probability of experiencing a short-term bounce. DIP uses state-of-the-art technology to provide investors
- with exposure to “buy the dip” opportunities that exhibit strong expected profit potential.

## Why DIP?

- **Identify Market Opportunities:** Our investment strategy is based on the belief that stocks tend to trade within a range, bound by successive highs and lows, DIP aims to identify only the low-to-high inflection points which are immediately followed by a short-term bounce (mean reversion).
- **Right Stock for the Right Market Environment:** DIP looks to identify the trading environment for individual stocks, sectors, and the overall market to determine which low-to-high inflection points of oversold stocks are most likely to experience a short-term bounce that has the potential for profit.
- **All-Weather Fund Design:** DIP is designed to be able to perform well across all market conditions, even substantially downward trending markets, by utilizing a constantly rebalanced selection of large-cap stocks identified as DIP candidates that are likely to experience a short-term bounce, along with weighted Index ETFs to maintain market exposure.
- **Use of Artificial Intelligence:** The AI technology behind DIP is able to analyze thousands of factors on hundreds of stocks simultaneously, identifying potentially profitable patterns and opportunities in fractions of a second.
- **Access:** DIP offers investors access to a technology which, due to its complexity and cost of implementation, is generally available only to sophisticated institutional or high net worth investors.

## Disclosures:

*Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a prospectus or summary prospectus with this and other information about the Fund, please call (800)617-0004 or visit our website at [www.dipetf.com](http://www.dipetf.com). Read the prospectus or summary prospectus carefully before investing.*

The Fund is distributed by Quasar Distributors, LLC. Exchange Traded Concepts, LLC (the “Adviser”) serves as the Fund’s investment adviser.

Investing involves risk, including loss of principal. The Fund is subject to numerous risks including but not limited to: Equity Risk, Large Cap Risk, Management Risk, and Trading Risk. The Fund is actively managed and may not meet its investment objective based on the Sub-Adviser’s success or failure to implement investment strategies for the Fund. The Fund’s principal investment strategies are dependent on the Sub-Adviser’s understanding of artificial intelligence. The Fund relies heavily on a proprietary artificial intelligence selection model as well as data and information supplied by third parties that are utilized by such a model. Specifically, the Fund relies on the Kaiju Algorithm to implement its principal investment strategies. To the extent the model does not perform as designed or as intended, the Fund’s strategy may not be successfully implemented and the Fund may lose value. A “value” style of investing could produce poor performance results relative to other funds, even in a rising market, if the methodology used by the Fund to determine a company’s “value” or prospects for exceeding earnings expectations or market conditions is wrong. In addition, “value stocks” can continue to be undervalued by the market for long periods of time. The Fund is expected to actively and frequently trade securities or other instruments in its portfolio to carry out its investment strategies. A high portfolio turnover rate increases transaction costs, which may increase the Fund’s expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains. The fund is new, with a limited operating history.
